

210.1 - Working in the vicinity of DNO / IDNO equipment Awareness (Including G39)

Duration:
5 hours

Group Size:
Maximum 10 learners

Who Should Attend?

All persons starting work for the first time in the Highway Electrical industry, and those persons that do not hold a HERS registration card.

Pre-requisites:

To gain maximum benefit and learning outcomes from this course there are a number of training modules, which are required before attending.

Course Aims:

This course aims to provide suitably qualified Engineers and HERS registered operatives with the knowledge required for working in the vicinity of DNO / IDNO equipment- including overhead lines in a safe and responsible manner and to comply with their responsibilities under organisation and legislative policies. This course excludes the removal and replacement of DNO cut-out fuse carriers.

Course Objectives

On completion of the course learners will:

- State the associated Hazards and Risks.
- State the acceptable clearances between lighting columns and overhead lines.
- State the different methods of providing a mains supply.
- State the responsibilities of operatives regarding commissioning, maintenance, repair and emergency attention.
- State the method of work to be adopted when working in the vicinity of live conductors.
- List the PPE requirements.
- State the correct procedure to remove and replace a cut-out fuse carrier for isolation purposes and fuse replacement.

Certification:

On completion, a multiple-choice assessment is to be completed. A HESA certificates will be issued for successful learners for each module.
